

Airlec Mine Site Solutions

Accommodation and amenities at mine sites present unique challenges. Airlec Mine Site Solutions solve challenges while providing the highest quality mine site building and maintenance services.

Airlec's solutions and service are second to none

At Airlec we recognise the value of a strong workforce and quality team. The quality of a mine site's amenities is therefore critical to retaining a talented crew. Airlec's solutions and service are second to none as

demonstrated by the flexibility and performance of our fly-in, fly-out teams.

Airlec's registered builders and licensed trades people have the capacity to construct and renovate all aspects of mine site living and housing facilities. Our permanent and fly-in, fly-out teams offer flexibility, while our design teams review specific accommodation environments and incorporate buildings, utilities, services, logistical operations and maintenance.

Our commitment to a three-tier management philosophy enables successful project completion. Communication, Structured Meeting Formats and Systemised Reporting have allowed Airlec management teams from the senior, general, and on-site levels to exceed the expectations of respected Australian mining companies.

Airlec provides quality and cost-effective solutions to some of Australia's most remote sites and we are not afraid of any challenge.

Those who forge relationships with Airlec have our experience and knowledge at their disposal for any and all mine site issues. Let us create the right solution for your project.
